EM 1110-3-141

Engineer Manual
No. 1110-3-141

9 April 1984

Engineering and Design
AIRFIELD FLEXIBLE PAVEMENT
Mobilization Construction

	<u>Paragraph</u>	<u>Page</u>
CHAPTER 1. INTRODUCTION		
Purpose and scope	1-1	1-1
Traffic classes	1-2	1-1
Definition	1-3	1-1
Use of flexible pavements	1-4	1-1
CHAPTER 2. PRELIMINARY DESIGN DATA		
Investigation	2-1	2-1
Exploratory borings	2-2	2-2
Soil classification and tests	2-3	2-2
Fill and subbase borrow areas	2-4	2-6
Availability of base and surfacing aggregate	2-5	2-6
Availability of other construction materials	2-6	2-6
CHAPTER 3. SUBGRADE EVALUATION AND PREPARATION		
General	3-1	3-1
Establishment of grade line	3-2	3-1
Subgrade evaluation test by CBR	3-3	3-1
Subgrade density and compaction	3-4	3-1
Subgrade stabilization	3-5	3-6
Fill quality	3-6	3-6
CHAPTER 4. SUBBASE COURSE		
General	4-1	4-1
Material source	4-2	4-1
Suitable materials	4-3	4-1
Additional requirements	4-4	4-3
CHAPTER 5. BASE COURSE		
General	5-1	5-1
Suitable materials	5-2	5-1
Design CBR of base course	5-3	5-1

	<u>Paragraph</u>	<u>Page</u>
Minimum base course and surface thicknesses	5-4	5-1
Base course gradation and tests .	5-5	5-1
Base course compaction.	5-6	5-4
Proof rolling	5-7	5-4
 CHAPTER 6. BITUMINOUS MATERIALS COURSES		
General	6-1	6-1
Selection of materials.	6-2	6-1
Design of bituminous concrete mix	6-3	6-3
Testing for mix design.	6-4	6-6
Thickness of bituminous courses .	6-5	6-10
Bituminous spray coats.	6-6	6-11
 CHAPTER 7. FLEXIBLE PAVEMENT THICKNESS DESIGN		
General	7-1	7-1
Flexible pavement design curves .	7-2	7-1
Design requirements	7-3	7-1
Thickness design.	7-4	7-1
Design examples	7-5	7-13
Stabilized pavement sections. . .	7-6	7-16
Special areas	7-7	7-17
 CHAPTER 8. SPECIAL SURFACE TREATMENTS AND SPECIAL DETAILS		
General	8-1	8-1
Surface treatment for improved skid resistance	8-2	8-1
Porous friction surface course. .	8-3	8-1
Prior preparation	8-4	8-1
Fuel resistant surfacings	8-5	8-1
Fuel resistant seal coat.	8-6	8-2
Juncture between rigid and flexible pavements	8-7	8-2
 APPENDIX A. HOT-MIX BITUMINOUS PAVEMENTS, DESIGN AND CONTROL		A-1
 APPENDIX B. REFERENCES		B-1

LIST OF FIGURES

- Figure 1-1. Typical flexible pavement and terminology.
1-2. Typical all bituminous concrete pavement.
1-3. Typical stabilized base section.

- 2-1. Approximate interrelationships of soil classifications and bearing values.
- 3-1. Procedure for determining CBR of subgrade soils.
- 6-1. Selection guide for asphalt cement.
- 6-2. Asphalt paving mix design, typical mix.
- 7-1. Flexible pavement design curves, Army Class I airfield, Type B and C traffic areas.
- 7-2. Flexible pavement design curves, Army Class II airfield, Type B and C traffic areas.
- 7-3. Flexible pavement design curves, Army Class III airfield, Type B and C traffic areas.
- 7-4. Flexible pavement design curves, Air Force light-load pavement, Type B and C traffic areas and overruns.
- 7-5(a). Flexible pavement design curves, Air Force medium-load pavement, Type A traffic areas.
- 7-5(b). Flexible pavement design curves, Air Force medium-load pavement, Type B, C, and D traffic areas and overruns.
- 7-6(a). Flexible pavement design curves, Air Force heavy-load pavement, Type A traffic area.
- 7-6(b). Flexible pavement design curves, Air Force heavy-load pavement, Type B, C, and D traffic areas and overruns.
- 7-7. Flexible pavement design curves Air Force shoulder pavement.
- 7-8. Flexible pavement design curves Air Force short-field pavement, Type A traffic areas and overruns.
- A-1. Sieve analysis.
- A-2. Specific gravity of bituminous mix components.
- A-3. Gradation data for hot mix design.
- A-4. Blending of stockpile samples.
- A-5. Gradation data for stockpile aggregates.
- A-6. Blending of stockpile samples.
- A-7. Gradation data for bin samples.
- A-8. Computation of properties of asphalt mixtures.
- A-9. Asphalt paving mix design (typical mix).
- A-10. Batch plant.
- A-11. Continuous mix plant.
- A-12. Dryer drum mixing plant.
- A-13. Types of hot plant mix paving mixture deficiencies and probable causes.
- A-14. Types of hot plant mix pavement imperfections and probable causes.

LIST OF TABLES

- Table 1-1. Pavement loading classifications.
- 2-1. Sources of information for preliminary subsurface investigations.

9 Apr 84

- 2-2. Minimum requirements for spacing and depth of exploratory borings.
- 2-3. Soil characteristics pertinent to roads and airfields.
- 3-1. Primary factors affecting subgrade evaluation and suitability.
- 3-2. Choice of CBR tests for pavement design.
- 3-3. Subgrade compaction requirements.
- 3-4. Compaction equipment and methods.
- 3-5. Special cases of subgrade treatment.
- 4-1. Test methods for subbase and base.
- 4-2. Maximum permissible values for unbound subbase.
- 5-1. Base course materials for flexible pavements.
- 5-2. Minimum surface and base thickness criteria.
- 5-3. Gradation of aggregates for graded crushed aggregate base course.
- 6-1. Specialized terminology for bituminous pavement
- 6-2. Tests for aggregate and bitumen mix.
- 6-3. Specifications for bituminous materials.
- 6-4. Aggregate gradations for bituminous concrete pavements.
- 6-5. Procedure for determining optimum bitumen content and adequacy of mix for use with aggregate showing water absorption of 2-1/2 percent or less.
- 7-1. Flexible pavement design curves.
- 7-2. CBR flexible pavement design procedure.
- 7-3. Equivalency factors.
- A-1. Design criteria for use with ASTM apparent specific gravity.
- A-2. Design criteria for use with bulk impregnated specific gravity.
